

ABSTRACT OF THE DISCLOSURE

5 A mobile radio terminal, such as mobile telephone,
equipped with a call-out detecting section for detecting
a call-out operation to a destination terminal of telephone
number information attached to data being displayed on a
data display section, a call-out control section, responsive
to the detection of the call-out operation, for executing
a call-out process based on the telephone number information,
10 and a display control section for controlling the data
display section to display the data after the call-out
control section starts executing the call-out process.
When the user of the source terminal, such as mobile telephone,
makes a call-out on the telephone number information attached
15 to the data displayed on the source terminal, the user can
enjoy talking with a companion person on the destination
terminal while looking through the data displayed on the
data display section.
